## On the Road!

**37th SCCM  
Critical Care Congress**  
February 2-6  
Hawaii Convention Center  
Honolulu, HI  
Booth #631

On the heels of a successful series of online webinars, MDNUniversity is pleased to present the following online learning programs ...

## Controlling Hyperglycemia: The Evidence. The Research. The Strategies.

**Inpatient hyperglycemia has everyone's attention.** Hospitals everywhere have either made or will soon be making the commitment to control glucose levels in an effort to improve patient outcomes. If your hospital has already implemented a protocol, it's likely to have faced one challenge after another in implementing it. But the benefits to patients are worth the effort. This webinar 3-part series will discuss:

- The considerable evidence supporting the benefits of controlling glucose in critically ill patients, as well as the incidental studies that suggest only marginal or insignificant improvement.
- The compelling research supporting the implementation of glucose management programs, identifies the obstacles to their implementation, and suggests the most practical paths to evade these obstacles.
- The strategies that simplify the shift toward effective glucose management and overcome the inertia that impedes positive change.

**Webinar Speakers:** Rattan Juneja M.B.B.S., M.D, M.R.C.P. (UK) and Corbin Roudebush, M.D., F.A.C.E., Co-Directors, Clarian Diabetes Centers, Indiana University School of Medicine.

## Building a Glucose Management Team: The Steps. The Techniques. The Results.

**Managing Blood Glucose Is Essential.** The research supporting tighter glucose control grows almost daily: Managing inpatient glucose levels leads to improved patient outcomes, reduced mortality, and lower costs. It's no surprise that hospitals everywhere are implementing tight glycemic control protocols. Recognizing its importance is one thing. Getting the appropriate people on board and the proper programs in place to manage glucose is quite another. This practical, evidence based webinar focuses on:

- The steps necessary to establish and sustain a well-managed TGC program.
- The techniques that worked, the benefits accrued, the pitfalls to avoid, and what's still left to accomplish.
